Contamination of foods and agricultural commodities by various types of toxigenic fungi is a concerning issue for human and animal health. Moulds naturally present in foods can produce mycotoxins and contaminate foodstuffs under favourable conditions of temperature, relative humidity, pH, and nutrient availability. Mycotoxins are, in general, stable molecules that are difficult to remove from foods once they have been produced. Therefore, the prevention of mycotoxin contamination is one of the main goals of the agriculture and food industries. Chemical control or decontamination techniques may be quite efficient; however, the more sustainable and restricted use of fungicides, the lack of efficiency in some foods, and the consumer demand for chemical-residue-free foods require new approaches to control this hazard. Therefore, food safety demands continued research efforts for exploring new strategies to reduce mycotoxin contamination. This Special Issue contains original contributions and reviews that advance the knowledge about the most current promising approaches to minimize mycotoxin contamination, including biological control agents, phytochemical antifungal compounds, enzyme detoxification, and the use of novel technologies.

Provides an introduction to Stata with an emphasis on data management, linear regression, logistic modeling, and using programs to automate repetitive tasks. This book gives an introduction to the Stata interface and then proceeds with a discussion of Stata syntax and simple programming tools like for each loops.

An extraordinary compendium of information on herbal medicine, Medicinal Plants of the World, Volume 3 comprehensively documents the medicinal value of 16 major plant species widely used around the world in medical formulations. The book's exhaustive summary of available scientific data for the plants provides detailed information on how each plant is used in different countries, describing both traditional therapeutic applications and what is known from its use in clinical trials. A comprehensive bibliography of over 3000 references cites the literature available from a wide range of disciplines. This book offers an unprecedented collection of vital scientific information for pharmacologists, herbal medicine practitioners, drug developers, medicinal chemists, phytochemists, toxicologists, and researchers who want to explore the use of plant materials for medicinal and related purposes.

Diabetic Neuropathy and Clinical Practice aims to improve the pathophysiological understanding of the entire spectrum from sensory motor to autonomic diabetic neuropathy, its correlation with the symptoms, improving thereby the communication with the patient including prognostication and other tools that one should utilize to better management. It also emphasizes the need to regain the grip on the basic sciences of clinical medicine to deal with it better - Anatomy, Physiology, Biochemistry and Pathology and gives the necessary details. The volume aims at explaining what the clinicians need most to help patients and may not possess.

Trigeminal nerve injuries present complex clinical challenges and can be very distressing for patients, resulting in abnormal sensations of the oro-facial region, yet surgeons may lack the knowledge required for optimal patient management based upon the specific nerve injury. This textbook is the first to be devoted to the diagnosis and management of trigeminal nerve injuries. A wide range of topics are covered, including historical perspectives, demographics, etiology, anatomy and physiology, pathophysiology, clinical neurosensory testing, nonsurgical management, and surgical management and principles of microneurosurgery, specifically involving the inferior alveolar and lingual nerves. Algorithms and a glossary are provided that will assist in the clinical management of these complex scenarios. The authors include surgeons with considerable experience and expertise in the field who have previously published on the subject. This book will serve as an ideal clinical reference for surgeons with patients who sustain trigeminal nerve injuries.

Opioid Receptors: Methods and Protocols serves as a comprehensive guide to both key new techniques and established methods for the investigation of genetics, structural biology, transcription, and post-transcriptional events of opioid receptors. Other methods cover the cellular detection and trafficking of opioid receptors in vitro and in vivo. Procedures aimed to investigate signaling pathways modulated by opioid receptors and model systems to study opioid receptor-mediated functions are also included. Finally, methods to assay behavioral effects mediated by opioid receptors are described. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective introductions, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Wide-ranging and authoritative, Opioid Receptors: Methods and Protocols will help both experienced and new entrants in this field to carry out their experiments successfully and with new inspiration.

During the past several decades, a significant international research effort has been directed towards understanding the composition and regulation of the precocular tear film. This effort has been motivated by the recognition that the tear film plays a critical role in maintaining corneal and conjunctival integrity, protecting against microbial challenge and preserving visual acuity. In addition, research has been stimulated by the knowledge that alteration or deficiency of the tear film, which occurs in numerous individuals throughout the world, may lead to desiccation of the ocular surface, ulceration and perforation of the cornea, an increased incidence of infectious disease, and potentially pronounced visual disability and blindness.
