This first volume offers up-to-date chapters on the systematics, general biology, conservation status, and conservation needs of lampreys. It will serve as an important reference for researchers working on any aspect of lamprey biology and fishery managers whose mandate is to control or conserve lamprey populations.

Presents an up-to-date overview of lamprey evo-devo research and life history evolution. Identifies key knowledge gaps related to lamprey biology and management. Includes chapters on lamprey taxonomy, phylogeny , distribution, metamorphosis, spawning migration and conservation of native lampreys. Important reference for researchers working on any aspect of lamprey biology and fishery managers whose mandate is to control or conserve lamprey populations.

Research related to lamprey biology increased in the 1950s in support of sea lamprey control in the Laurentian Great Lakes, and these efforts considerably advanced our understanding of lamprey ecology, behavior, and chemical communication. Recently, lampreys have started getting more widespread attention.

Lampreys are, to many people, non-charismatic organisms. In recent decades, the public perception and conservation needs of native lampreys have been overshadowed by the need to control invasive sea lamprey (*Petromyzon marinus* L., 1758) in the Laurentian Great Lakes (Marsden and Siefkes, 2019, Neave et al., this issue).
