Data Science is booming thanks to R and Python, but Java brings the robustness, convenience, and ability to scale critical to today's data science applications. With this practical book, Java software engineers looking to add data science skills will take a logical journey through the data science pipeline. Author Michael Brzustowicz explains the basic math theory behind each step of the data science process, as well as how to apply these concepts with Java. You'll learn the critical roles that data IO, linear algebra, statistics, data operations, learning and prediction, and Hadoop MapReduce play in the process. Throughout this book, you'll find code examples you can use in your applications. Examine methods for obtaining, cleaning, and arranging data into its purest form Understand the matrix structure that your data should take Learn basic concepts for testing the origin and validity of data Transform your data into stable and usable numerical values Understand supervised and unsupervised learning algorithms, and methods for evaluating their success Get up and running with MapReduce, using customized components suitable for data science algorithms

Ask Dr. Mueller captures the glamour and grittiness of Cookie Mueller's life and times. Here are previously unpublished stories - wacky as they are enlightening - along with favorites from Walking Through Clear Water in a Pool Painted Black and other publications. Also the best of Cookie's art columns from Details magazine, and the funniest of her advice columns from the East Village Eye, on everything from homeopathic medicine to how to cut your cocaine with a healthy substance. This collection is as much an autobiography as it is a map of downtown New York in the early '80s - that moment before Bright Lights, Big City, before the art world exploded, before New York changed into a yuppie metropolis, while it still had a glimmer of bohemian life.

The Nerf Blaster Modification Guide has all you need to know to create a cooler-looking Nerf Blaster with increased range, projectile speed, and firing capacity. Luke Goodman—better known on YouTube as “Out of Darts”—guides readers through the basics of Nerf's two main propulsion systems and provides simple mods that kids and their parents can make to their foam blasters. Nerf Blasters, first introduced in the 1980s, are experiencing a Renaissance! Nerf Blasters are back to being one of the hottest toys on the market and have spawned a YouTube phenomenon of DIYers showing off the modifications and tweaks they've made to their blasters. With the modifications detailed in this guide, your Nerf Blaster will not only perform better, but look cooler, too. The guide includes sci-fi, history-, and steampunk-inspired paint jobs. Every project comes with easy-to-follow instructions, which are completely illustrated with step-by-step studio photography; so you'll

A comprehensive history of American women writers explores the contributions of more than 250 female authors--both famous and little-known--to every field of literary endeavor and reflects on their role in the evolution of our American literary heritage.

Dr. Trent Moore's life is complete--a no-strings relationship, financial security, and great health--until he is summoned to his father's grave and discovers a grave robber has stolen one of his father's bones ... a finger bone. From there, Trent's seemingly perfect world spirals out of control. Strange occurrences happen, and the sexy lead detective informs him that a grief-stricken mother has placed a curse upon him. As his near-death experiences ramp up and he finds himself falling in love, he's beginning to believe there may be some truth to it all. But will he run out of time before he can tell Ciarra he loves her? When Detective Ciarra Pacelli is assigned to a prominent judge's suspicious death, she doesn't know her little world is about to be turned upside down. She discovers other possible victims of a deadly Voodoo curse, one being the gorgeous and stubborn doctor. As she becomes wrapped up in protecting him at all costs, she finds she's fighting against her developing feelings for him. Once she realizes she can't, she gives her all in finding a cure against the curse that promises to take him away from her for good.

The New York Times–bestselling author provides an “entertaining” look at how artists enlighten us about the workings of the brain (New York magazine). In this book, the author of *How We Decide* and *Imagine: How Creativity Works* “writes skillfully and coherently about both art and science”—and about the connections between the two (Entertainment Weekly). In this technology-driven age, it’s tempting to believe that science can solve every mystery. After all, it’s cured countless diseases and sent humans into space. But as Jonah Lehrer explains, science is not the only path to knowledge. In fact, when it comes to understanding the brain, art got there first. Taking a group of artists—a painter, a poet, a chef, a composer, and a handful of novelists—Lehrer shows how each one discovered an essential truth about the mind that science is only now rediscovering. We learn, for example, how Proust first revealed the fallibility of memory; how George Eliot discovered the brain’s malleability; how the French chef Escoffier discovered umami (the fifth taste); how Cézanne worked out the subtleties of vision; and how Gertrude Stein exposed the deep structure of language—a full half-century before the work of Noam Chomsky and other linguists. More broadly, Lehrer shows that there’s a cost to reducing everything to atoms and acronyms and genes. Measurement is not the same as understanding, and art knows this better than science does. An ingenious blend of biography, criticism, and first-rate science writing, *Proust Was a Neuroscientist* urges science and art to listen more closely to each other, for willing minds can combine the best of both to brilliant effect. “His book marks the arrival of an important new thinker . . . Wise and fresh.” —Los Angeles Times
