Innovation is the driving force behind economic growth. The knowledge that f- ters innovation builds on both systematic research and serendipity. The availability of new knowledge-be it technological or organizational (social)-is, however, - suf?cient. An institutional structure must be in place that enhances mutual learning among the actors involved and that stimulates cooperation, as well as competition. This recognition has inspired this volume, which focuses on national innovation s- tems and sectoral (technology) innovation systems that differ widely between co- tries, due to their diverse historical paths and distinctive cultural and societal f- tures. With regard to theory, most chapters incorporate a mix of endogenous growth theory and evolutionary thinking. Endogenous growth theory places an emphasis on the interplay between technological knowledge and various structural charact- istics of the economy and society, as well as on the results of economic growth. Concepts related to technology development, accumulation of knowledge on te- nology, and technology diffusion feature prominently here. In evolutionary thi- ing, and in particular coevolutionary thinking, the focus is on close links between technology and institutions, whereby the functionality of technology is in?uenced by certain dynamic interactions with institutional systems. Information technology turns out to be a clear example of such a development.

The second volume targets practitioners and focuses on the process of green architecture by combining concepts and technologies with best practices for each integral design component

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.
