Volvo F12 Engine - YouTube

The Middle East has always been one of the most challenging destinations for lorry drivers. In the 1970s and 80s, many drivers may not have even heard of the destinations they were sent to before heading out eastwards. Along the way they endured extreme weather conditions, bureaucratic nightmares, and the physical trials of keeping themselves and their trucks operational over many thousands of miles of poorly maintained and dangerous roads. Their adventures have become legendary within the trucking world.In this book Dave Bowers tells with humour and insight the amazing stories of people driving to Middle East destinations, battling against all the odds to deliver their loads. The inspiration comes from his own experience through those routes and in particular on one adventurous journey homewards from Tehran in 1975, when he happened to be stranded in Iran, with no cash to speak of and spending many nights sleeping in abandoned trailers along the way. Dave travelled homewards after he was given lifts in trucks returning to Europe. These were driven by drivers who had many tales to tell, and this book was motivated by the need to keep these fascinating stories alive.Illustrated with photographs of the drivers and vehicles taken at the time. Beyond the Bosphorus records what it was like for ordinary HGV drivers to get involved in something so dramatically different from their everyday working lives in the UK. It will be of interest to lorry drivers, general vehicle enthusiasts and also those with a historical and social interest in the Middle East alike.

Volvo F12 Engine - YouTube

Lavishly illustrated with rare and unpublished photographs, Volvo Lorries traces their history in Britain from the early F86 imports of the 1960s to the FH16 750 bhp fleet flagships seen on the roads today.

Following the success of his previous book, Scania at Work, Patrick Dyer takes a close look at another favourite of long haul drivers, DAF. Although now owned by the American company, PACCAR, and with links to Leyland, the roots of DAF trucks are firmly in Eindhoven, Holland. The company started truck manufacture relatively late, but in the early 1970s it took an industry lead with its flagship 2800. The 'Supercontinental' version, with its wide tilt sleeper cab with two full-size bunks and its powerful 11.6-litre DAF engine was a natural for long-haul work. The successor 3300 and 3600 models took the company into the 1980s, running alongside Scania and Volvo as a long-distance driver's favourite. The 330 hp engine suited it for the heavy-duty special transport that became a feature of the period. Patrick W Dyer, author of two books for Old Pond - Scania at Work and Know Your Trucks - works in the automotive industry and is based in Essex. His new book is rich in photographs from the 1970s and '80s.

The Transcontinental was an audacious attempt by Ford to challenge the best heavy truck producers in Europe. Developed by a dedicated team of designers, based in Essex, England, the truck was a masterpiece of proprietary component engineering. Engines from Cummins, gearboxes from Fuller, axles from Rockwell and an award-winning cab from Berliet all came together in a dynamic package, which shattered the performance test records of the industry magazines in 1975. Always intended as a fleet machine, the big Ford instead gained the image of the 'premium flagship', often rated alongside established leaders such as the Scania 111 and Volvo F88. Heavily revised in 1978, the Mk 2 remained in production until 1983. Although the Transcontl never made a profit for Ford, this big lorry which was magnificent to drive remains a memorable model, loved by truckers and truck enthusiasts alike. To celebrate the Transcontl, Patrick Dyer has gathered over 200 photographs to show the truck in its full glory over the years and in a variety of liveries and locations. Each photograph has an extensive caption. When read together these give the complete story of the introduction and development of the model. There is extensive information on bodywork and engine specifications, the little differences that changed over time and the details which made the model so special to those who drove it. Photographs show the trucks at work abroad and there are shots of them on the production line. To set the Transcontl in context, Patrick also considers the models which came before and after. Patrick's informative and friendly writing style gives the impression of sharing this story with a fellow enthusiast. The entertaining foreword is by George Bennett. The Ford Transcontinental at Work by well-known trucking author Patrick W Dyer is an absolute belter. 11/10 on the BLB anorak scale. Biglorryblog

A comprehensive evaluation of the basic theory for acoustics, noise and vibration control together with fundamentals of how this theoretical material can be applied to real world problems in the control of noise and vibration in aircraft, appliances, buildings, industry, and vehicles. The basic theory is presented in elementary form and only of sufficient complication necessary to solve real practical problems. Unnecessary advanced theoretical approaches are not included. In addition to the fundamental material discussed, chapters are included on human hearing and response to noise and vibration, acoustics and vibration transducers, instrumentation, noise and vibration measurements, and practical discussions concerning: community noise and vibration, interior and exterior noise of aircraft, road and rail vehicles, machinery noise and vibration sources, noise and vibration in rapid transit rail vehicles, automobiles, trucks, off road vehicles, and ships. In addition, extensive up to date useful references are included at the end of each chapter for further reading. The book concludes with a glossary on acoustics, noise and vibration
